

PujaPath Live

15-Page Easy User Guide

Find pandals, use the live map, plan walking routes, track visits, and use the festival helper tools.

Website

<https://pujapath-free-1.onrender.com>

Best starting point

Open the site, wait for the map and pandal list to load, then choose a feature.

02 What you will learn

Use this page like a map: each section is one practical task.

- 03 Create an account / sign in
- 04 Search for a pandal
- 05 Filter by zone
- 06 Read the map and markers
- 07 Use your current location
- 08 Open a pandal result + find nearest 3
- 09 Plan a walking route
- 10 Follow the navigation view
- 11 Find nearby essentials
- 12 Use the Pandal Checklist
- 13 Use the Puja Day Planner
- 14 Use Budget + Favourite Sharing
- 15 Troubleshooting + quick checklist

Recommended order

Start with the map and pandal search. Then use location + route planning when you are ready to travel. Use Checklist, Planner, Budget and Favourite Sharing to organize your Puja days.

03 Create an account or sign in

Account features are available through the app sign-in area.

The app supports Sign in, Sign up and Forgot password?. After you are signed in, a Sign out button is shown.

Step 1 Enter your email.

Step 2 Enter your password.

Step 3 Press Sign up for a new account, or Sign in for an existing account.

Step 4 Use Forgot password? when you need a reset.

Keep your password private. Do not share it with other people.

04

Search for a pandal

Use the Pandal List search box when you know a pandal name or want to narrow a long list.

The Pandal List shows a count such as “Showing X pandals”. The search field is the fastest way to find a name.

1. Scroll to Pandal List.
2. Click the search field: “Search pandal by name”.
3. Type part or all of the pandal name.
4. Open the matching card and use its available actions.

2 - PANDAL LIST

Pandal List

Search pandal

Showing 0 pandals

Nearby Essentials & Transport

Click “Nearby essentials” to find nearby places.

Tip: Start with a short word from the name. This helps when you are not sure of the exact spelling.

05 Filter pandals by zone

The current build provides All zones, North Kolkata, Central Kolkata and South Kolkata.

Choose a zone from the app selector.

This is useful when you want to explore one part of Kolkata instead of the full set of pandals.

1. Open the zone selector near the live map controls.
2. Choose All zones, North Kolkata, Central Kolkata or South Kolkata.
3. Scroll to the Pandal List and review the reduced set.

4 - ZONE BADGES

Zone Badges Zone progress / badges

Complete every pandal in a zone to unlock its badge.

No zone data available.

The Zone Badges area is a progress view: completing every pandal in a zone can unlock its badge.

06 Understand the live map

The map is the main visual way to see where pandals are located.

What you see

Multiple markers represent pandals. The map can be zoomed with the + and - controls. The map is based on OpenStreetMap tiles.

1. Use + to zoom in for streets and nearby markers.
2. Use - to zoom out for a wider area.
3. Pan the map to explore another part of Kolkata.
4. Use the Pandal List below the map when marker labels are crowded.

1 - LIVE MAP

Map + pandal markers

07 Use your current location

Location is needed for nearby searches and for starting a walking route.

The website asks the browser for your location. Your current position is shown as a blue dot when a location fix is available. Route planning also reads your current position.

1. When the browser asks for location permission, choose Allow.
2. For better accuracy, keep GPS/location enabled.
3. Wait a few seconds for the blue position marker.
4. Use the page controls again after the position is available.

Important: The screenshot is an example of a location error state from the supplied captures. It is useful for troubleshooting; it does not mean the feature must fail every time.

Open a pandal result and find the nearest 3

Each pandal card can show its zone and address, plus useful actions.

When a pandal matches your search, its card can include the pandal name, zone and address. The current build also provides a Nearest 3 action.

1. Find a pandal in the Pandal List.
2. Review the zone and address.
3. Press “Nearest 3” to compare nearby pandals.
4. Use the distance and estimated walking time to choose the next stop.

The Nearest 3 section uses distance in meters and an estimated walking time so you can build a simple walking sequence.

09 Plan a walking route

Use “Plan route” on a pandal card to start route planning from your current location.

The route view draws a blue walking path and shows a Route Summary with destination, distance and walking time.

1. Choose a pandal.
2. Press “Plan route”.
3. Allow location access when asked.
4. Wait while the route is calculated.
5. Read the route summary before you start walking.

Use the route as a walking guide, but still follow real-world signs, crossings and local traffic rules.

Follow the navigation view

During navigation, the app can update your position and the route progress.

The route screen can show the current navigation state, including remaining distance and walking time. The app also uses movement information to keep the navigation marker aligned with the route.

1. Start a route from a pandal card.
2. Keep location permission enabled while walking.
3. Follow the blue route line.
4. Watch the route summary / remaining values.
5. Press Clear Route when you are finished or want to choose another destination.

11

Find nearby essentials and transport

The “Nearby essentials” feature searches for useful places close to you.

The app contains a Nearby Essentials & Transport section. The feature uses your current location, then shows nearby results when data is available.

1. Click “Nearby essentials”.
2. Allow location access.
3. Wait for nearby results.
4. Review the place type, name, street and distance.
5. Use “Open Map” when available to view a place on the map.

3 - NEARBY

Pandal List

 Search pandal by name

Showing 0 pandals

Nearby Essentials & Transport

Click “Nearby essentials” to find nearby places.

The supplied screenshot shows the section before results load. That is normal when a location fix or nearby data is not yet available.

12

Track your Puja visits with the Checklist

The checklist gives you a simple progress view of the pandals you have visited.

Open Pandal Checklist. The page shows Total Pandals, Visited, Remaining, Progress, and Favorites. Zone cards show visited/unvisited counts.

1. Press "Open Pandal Checklist".
2. Mark the pandals you have visited.
3. Use Favorites to keep special pandals in your personal list.
4. Watch the Progress percentage grow as you visit more places.

When the checklist list screen is open, use "Back" to return to the checklist landing page; use "Back to App" to leave the checklist and return to the main app.

Organize your days with the Puja Day Planner

Use the planner to turn your pandal list into a day-by-day plan.

The main app includes a Puja Day Planner button. The planner is opened as its own module and receives the current pandal list.

1. From the main action area, press “Puja Day Planner”.
2. Choose a day/task in the planner.
3. Add the pandals you want to visit.
4. Save or review the plan before heading out.
5. Close the planner to return to the main app.

Use Budget Tracker and Favourite Sharing

Two helper modules make group planning easier.

Budget Tracker

Open “Puja Budget Tracker” from the main action area. Use it to record and review Puja spending.

1. Add an expense item.
2. Enter the amount.
3. Keep checking your total while planning visits.

Favourite Share

Open “Share Favourite List”. The current app checks that you are signed in before sharing actions.

1. Choose the favourite pandals you want to share.
2. Use the group/invite controls in the module.
3. Turn sharing on or off as needed.

UI previews are not captured screenshots. They are included only to make the button path easy to understand; use the exact live module labels in the website.

Troubleshooting + 30-second quick checklist

Use these checks before you refresh the page.

Location unavailable

Allow location access in the browser, make sure device location is on, and wait for a better GPS fix.

Pandal list is empty

Check that the page has finished loading. Clear the search text and choose All zones.

Route does not start

Allow location permission and retry Plan route. The app needs a current position to create a starting point.

Need to leave Checklist

Use Back inside the checklist list, then Back to App on the checklist landing page.

Need to stop navigation

Press Clear Route. Then select another pandal when you are ready.

Quick checklist before you start walking: 1) site loaded, 2) location allowed, 3) pandal selected, 4) route visible, 5) phone battery and data are available.

You are ready to use PujaPath Live.
